With 7+ years leading end-to-end feature design from initial discovery to high-fidelity, cross-platform prototypes, I specialize in building UX-Product-Engineering collaboration and driving efficiency through usability. Drawn to operational, multi-stakeholder workflows.

Experiences

Senior UX Designer @ GoTo | DEC 2021 — CURRENTLY

Cloud communications and Contact Center-as-a-Service platform

- Worked in multiple interdisciplinary teams, each with a different focus within our CCaaS (Contact Center as a service) context, including AI-led initiatives
- Orchestrated multiple AI agents across the design workflow, accelerating time-to-production rhythm by delivering high-fidelity dynamic prototypes for our iterations and validating decisions early on through synthetic user testing
- Led product trio collaboration based on UX outcomes in order to guide our product development and metric definition so that we deliver user-centric value
- Handled end-to-end feature development, facilitating ideation, prioritization and alignment dynamics with different stakeholders
- Documented and shared industry knowledge among peers, exposing and demoing the product and enabling an ever-growing team to navigate the challenges and intersections between the teams involved

UX/UI Designer @ Paradigm | OCT 2020 — DEC 2021

ERP and quoting software for manufacturers, distributors, and retailers in homebuilding industry

- As the company's first UX designer, set the course for user experience focused-collaboration among the multiple technical teams, establishing design thinking methodologies as part of the feature development process
- Advocated for design systems as key to standardize and speed up front-end work, starting by organizing and maintaining a base component library adapted to each product's needs

Product Designer @ QuintoAndar | AUG 2019 — MAR 2020

LATAM's most disruptive unicorn in the real estate business, digitally facilitating tenants' search for homes

- Crafted new multi-channel experiences targeting increased funnel conversion for tenant property visits, always testing and iterating on the user journey from digital to real-world home searching
- Designed and tested new features for the platform that would meet user's and business' needs, observing impact on time-to-match and visit volumes as part of the key success metrics
- Conducted user research routinely from the definition of its goals and methods to the compilation of insights that would drive the squads' decisions; structuring interview scripts according to our needs, recruiting users, leading the sessions and analyzing findings.
- Supported the design system team throughout the migration of our shared assets from our toolkit (Sketch + InVision + Abstract) to Figma

Growth Designer Intern @ Cobli | DEC 2018 — JUL 2019

Startup-owned fleet management platform for logistics and delivery operations

- Designed growth experiments (landing pages, multi-channel campaigns, etc) targeting logistic operations managers in the context of a growth-driven team, aiming at usability and conversion improvements
- Created promotional material for both print and digital media, including graphic signalization for industry-focused events and digital retargeting ads, strengthening brand positioning

Education

University of São Paulo (USP) | 2015 — 2019

Bachelor's degree in Design

Skills

Problem-solving focused collaboration | User outcome-driven design | AI-enhanced design workflows | Figma | Wireframing | Low & High-fidelity mock-ups | Cross-platform prototype | User journey mapping | Usability testing | User research | Design systems
